When Supported	When Supported	When Supported	
S/W VERSION[S]	**TOOL[S] AFFECTED**		
61.0 or higher	400SD,300PRO,400PRO,500		

Overview:

RITE-ID® or "Aftermarket Sensor Search" allows the Technician to use the tool to wirelessly determine the sensor fitted within the Wheel/Tire. This feature is supported for the following aftermarket sensors:

- RITE-SENSOR®
- EZ-sensor®
- IntelliSens®
- QWIK-SENSOR®

The feature allows the Technician advanced diagnostics (such as determining an unsynchronized RITE-SENSOR®), along with pre-determining if the correct service kit is in stock.

The primary benefit of RITE-ID® is the ability to know what type of sensor is installed so that an accurate service quote can be provided to the customer. Proper service kit inventory can also be determined before work begins.

Process:

1) Select the Make-Model-Year
2) Select TEST sensor
3) Press the Enter Key when the cursor is at the wheel location you want to check
4) Tool will search for the supported sensors
5) Tool will display the information on the screen.
